

Introducing the new

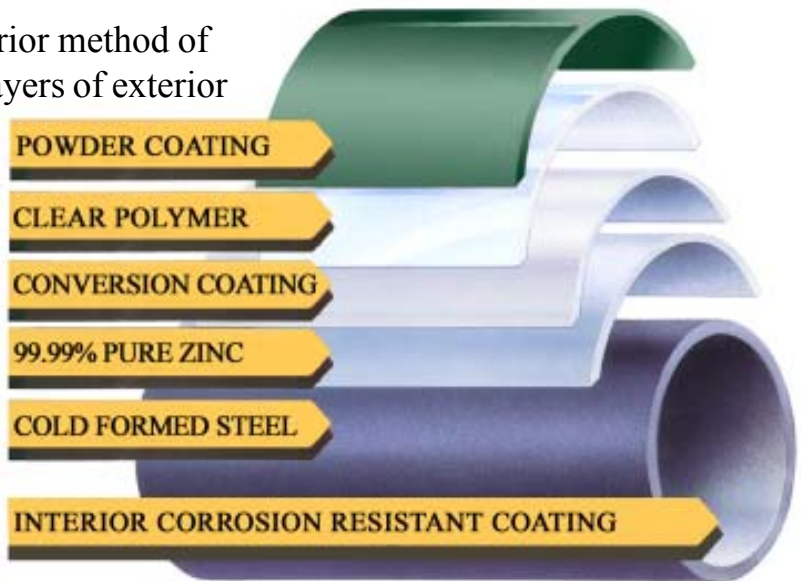

# Premier XS

- ◆ **Steel**– Extra Heavy with Zinc Flo-coat corrosion resistant process.
- ◆ **Exterior Finish**– Baked on polyester powder coat for maximum protection.
- ◆ **Self-locking Gears**– Available in three superior materials:
  - ◆ Stainless Steel
  - ◆ Plated Steel
  - ◆ Brass
- ◆ **Gear housing and handle**– Available in Chrome or Brass finish.

# Premier XS

Allied's Flo-coat® process is a unique and superior method of galvanizing steel. The steel post receives four layers of exterior protection; zinc galvanizing, conversion coating, clear polymer top coat and a polyester powder coat. The result is a smooth, sleek post that is unmatched in strength and durability. The baked on polyester powder coat results to a post that is virtually chip proof and fade proof. The interior of the post receives a corrosion resistant coating to prevent rust. Standard colors are forest green and black, with other colors available. Ground sleeves for post removal are optional.

## New Look

The Premier XS has a new sleek, flat top post design. The caps and gear housings are of zinc diecast for maximum exterior use.

## Attractive Hardware

The gears are available in three superior materials: plated steel, stainless steel or brass. The small gear is case-hardened to prevent jamming. The self locking gear mechanism has a ratio of 30 to 1 to ensure easy operation. The gear housing and handle are available in chrome or brass finish. The handle is easily removed which, with the mechanism's internal design, leaves virtually nothing on the outside to snag clothing or cause injury.
